

NIRQuest Spectrometers

improved performance with more grating options

A high-performance optical bench, low-noise electronics and various grating options make NIRQuest Spectrometers truly extraordinary. This new generation of small-footprint, near-infrared spectrometers is available in three models that cover various ranges between 900 nm and 2500 nm, and are ideal for applications ranging from analyzing moisture content in food and beverage products to analyzing trace metals in wastewater. In addition to improved optical bench performance, NIRQuest Spectrometers are available with more grating options than our previous NIR Spectrometers. That allows users to take advantage of the different grating characteristics to maximize experiment setups.
